

COMPETITIVE COMPARISON

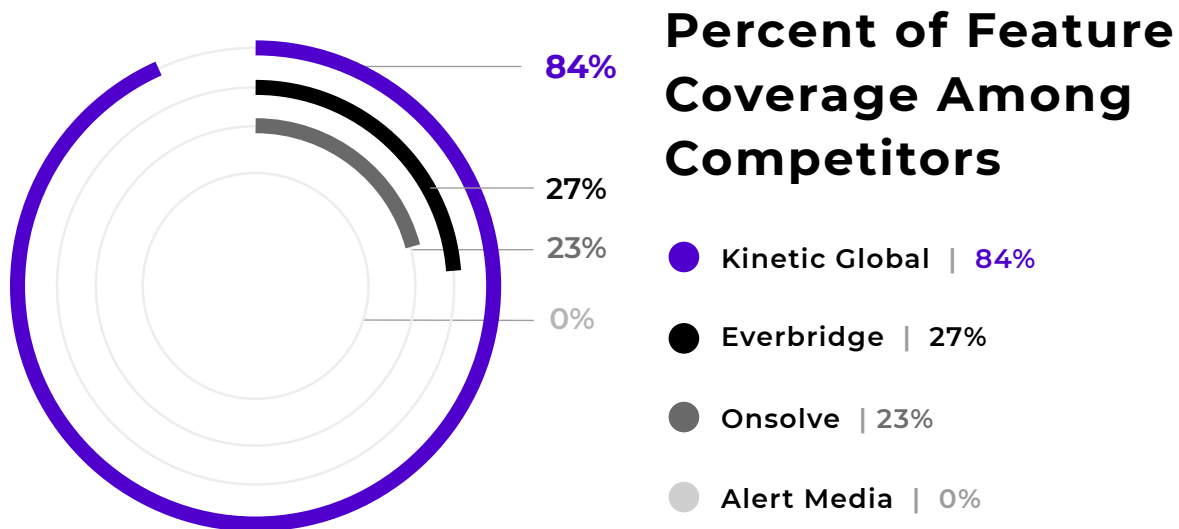

Incident and Case Management

Kinetic Global is the only Critical Event Management Platform with COMPLETE Incident and Case Management capabilities built natively into the platform.

The module has been carefully designed to provide efficient cross-functional collaboration, communication, and maximum efficiency - all resulting in the higher level confidence needed to reduce the complexity of connecting risk data and attributing and detecting signals or associations. Further, automated activities tracking ensures team members can view detailed audit trails for compliance, as well as metrics that measure timelines and details which directly support issuing consistent reports. But it doesn't stop there - with customized dashboards and reports teams can share investigation findings in order to centralize data, present analysis to key stakeholders, thus propelling the organization into more proactive and successful risk mitigation practices.

The advantage gained with Kinetic Global means that end users no longer have to toggle from multiple applications and screens to view and update their tasks.

Emergency teams can now report updates to leadership quickly, and leadership is up-to-date with real-time dashboards. Kinetic Global's Incident and Case Management makes it easy for teams to update their tasks, collaborate across the organization, and keep leadership updated.
